

Greenbrier Valley Computer Enthusiasts

Wednesday, June 2nd @ 7:30PM
Greenbrier County Public Library
Main Floor meeting room

MySQL

This is the second in a series of meetings featuring basic introductions to four popular database servers: Microsoft SQL Server, MySQL, Oracle, and PostgreSQL. We will discuss the relative merits of each and cover some concrete examples of how each database works.

This month's database will be Oracle's MySQL. We will be focusing on installing MySQL Community Edition under Linux (Ubuntu live CD's will be available) and building a simple database. Participants are encouraged to bring a laptop so they can follow along. MySQL is an open source database. The free community edition is fully functional.

Presented by Aaron Chantrill
